Office Action Summary

A n a b s t r a c t i s r e q u i r e d .

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. § 102(b) as being anticipated by Wagner (4057725) or Takahashi et al (5164973). Figure 2 of Wagner shows detector modules 51-61 configured as a polygon. Figures 2 and 6 of Takahashi show detector modules b configured as a polygon.

Claims 1, 3 and 4 are rejected under 35 U.S.C. § 102(b) as being anticipated by Shaw et al (4338521). Shaw teaches detector modules 46 arranged as a polygon around an imaging region of a CT scanner. Each module comprises a PC board 76 and photodiode chip 96.

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as

-3-

prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 2, 5 and 6 are rejected under 35 U.S.C. § 103 as being unpatentable over Shaw. Official notice is taken that cadmium telluride is a common semiconductor and that printed circuit boards are commonly made via photolithography, and it would have been obvious to employ these in Shaw's modules..
